Key Questions

- How does each system prioritise innovation and safeguards? How do security measures and vulnerabilities affect both innovation and safeguards?

- How are risks and benefits managed differently under autocracies and democracies? How do the risks and benefits support or undermine democracies or autocracies?

- How does each system address the long-term societal, economic and security effects of AI? What lessons can we draw?

Apply

- Next week
  - Review ethical frameworks and safeguards—and cyber security settings. Are they sufficient? Are they secure? Are there review, escalation points, and means of resolution and recompense?
- Three months
  - Are the systems sufficiently inclusive? What is the balance between agency and security? Are your systems human-centered? Have users data ownership and digital property rights?
- Six months
  - How are you tracking long-term effects—and the interactions of people, process and technology? If all systems are human, and so political, engage with politics. Do you understand your supply chains and controls, access and data obligations in the technology stack?
